In Task 1 there is a sentence:

Here is an example of equivalent calls to if and my-if that behave exactly the same, in terms of output:

It should be calls to and and my-and.

For Task 3, it says you used array and getElement, but above the tasks section it states that we cannot use lists or arrays.

Fixed.

In task 3, you may use array and getElement (but as noted, they are not necessary).

I removed the reference to a recurrence.

I will generate some sine wave images that correspond to the scaling and add them this weekend.
