I have been trying to submit my preliminary assignment 1 on the windows bash from the anniversary update, and followed the instructions exactly as they are posted at the bottom of the assignment 1 document. But when I try and use the command submit cs201 lusth assign1, it keeps giving me the error: "submit: command not found" does anyone know how to fix this?

Thanks.

Did you follow the instructions for linux? http://beastie.cs.ua.edu/cs201/linux.html

Did you close down bash and open it up again?

The reason submit is not found is because wherever you put it, it's not in your PATH. If you run the command:

cat ~/.bashrc

you should see a line near the bottom that looks like:

export PATH=~/.bin:$PATH:.  

If you don't see this, you installed submit incorrectly.
