Subject: Operator Precedence  
Posted by bnlowe on Fri, 09 Sep 2016 16:30:28 GMT  
"The operators have precedence in increasing order from assignment to plus to minus to times to divides to modulus to exponentiation. Parentheses override precedence. All operators are left associative"

So, just to be super sure, addition and subtraction actually do not have the same precedence, correct?

That's correct-- they have different precedence.
