Subject: Ch. 15 Dynamic Programming dead link to questions

The link for review questions dealing with ch. 15 Dynamic Programming leads to a 404 error page. Someone brought this up in class on Thursday and Dr. Lusth acknowledged the problem. I may have missed another topic post about this, and if so just reply as such. Otherwise I wanted to add this topic as a reminder that this link needs to be redirected or notice given to disregard these questions relative to Exam 2.

Thank you,
Benjimin Aaron

I've added some memoization questions. I'll add some dynamic programming questions in a bit. The only difference between the two is that dynamic programming questions will also ask, "how do you fill out the table?".
