I am receiving a DNS error when trying to access the beastie website/forums. Chrome's error message is: ERR_NAME_NOT_RESOLVED. Also mxToolBox is not able to find the beastie website: link. I am only able to access the beastie using the VPN.

It stopped working the other day for me on campus. Probably OIT doing their best to make it hard on everyone.

It was OIT, not the DOS attack on Dyn that was occurring roughly at the same time.
