Subject: Will Commands Have Whitespace?

I was wondering if commands would have whitespace around them? For example would sr be a valid set of commands, or will it always be s r. Thanks.

I don't believe so. The assignment says
Quote:individual tokens may be separated by arbitrary amounts of whitespace.
I really doubt "arbitrary" includes none, since that'd make input hellish.

^ Correct, there will be at least one character of whitespace around tokens/delimited strings.
