Just to be clear, when the practice problems for the prerequisite material reference "fillable arrays," they are referring to the fillable arrays defined on the Beastie website http://beastie.cs.ua.edu/DS-intro/index_6.html, correct? I don't recall this being stated explicitly in class and I want to be certain.

If so, then I'm assuming we also use the definition of circular arrays, dynamic arrays, etc. from the beastie websites as well to define the data structures referred to in the prerequisite material practice test.

EDIT: Links for anyone who is interested:

Subject: Re: Fillable Arrays - Definition?

Fillable arrays are discussed in the Encyclopaedia (see the link on the cs201 home page).
