Are there going to be real and string .c/.h files provided or should we write those ourselves? Also, to clarify we're allowed to use the integer.c/integer.h provided from assignment 0 correct?

---

We should write those.

Not sure about integer.c.

---

Not one for string, maybe one for real. I mean, you could just allocated a real/integer using malloc and set the value in memory to whatever you read in and not have to use any external stuff.

---

Can we write one for strings?

---

Yes, but all you really need is displayString and stringComparator, since C strings are already pointers.
