Can someone tell me what tests 7, 14, and 18 performed? They "failed abnormally" for me, but I am not sure what to test them with.

I think they were all empty queues.

^ Correct, if you mean empty files (which leads to empty queues).

Does anybody know what the correct behavior for these tests is?  
Do you just simply print nothing and exit?

`.sqsort -d emptyFile.txt

[]

[]

^^Should print like any other sort. A good implementation of sqsort does not require a special condition for an empty list; rather, it prints the initial queue, sorts it, and then prints the final result.
