Subject: Reading in strings with newlines

So when I am reading in from the corpus if I encounter this string.

"Girls' night out!"

The char* that would get sent into the tree would be "girls night out" or "girlsnightout".

I know on the instruction sheet it says Quote:all spans of whitespace (spaces, tabs, and newlines) should be replaced with a single space but I just want to make sure I am handling this correctly.
