Another check. Try testing binomial with this:

```c
Binomial *heap = newBinomial(displayInteger,compareInteger,NULL);
fprintf(stdout,"Inserting...\n");
(void) insertBinomial(heap,newInteger(4));
displayBinomial(stdout,heap);
fprintf(stdout,"Inserting...\n");
(void) insertBinomial(heap,newInteger(8));
displayBinomial(stdout,heap);
fprintf(stdout,"Inserting...\n");
(void) insertBinomial(heap,newInteger(16));
displayBinomial(stdout,heap);
fprintf(stdout,"Inserting...\n");
(void) insertBinomial(heap,newInteger(5));
displayBinomial(stdout,heap);
fprintf(stdout,"Inserting...\n");
(void) insertBinomial(heap,newInteger(1));
displayBinomial(stdout,heap);
I get:
Inserting...
0: 4-0
----
Inserting...
0: 4-1
1: 8-0(4-1)
----
Inserting...
0: 16-0
----
0: 4-1
1: 8-0(4-1)
----
Inserting...
0: 4-2
1: 8-0(4-2) 5-1(4-2)
2: 16-0(5-1)
```
That's also what I got.

Can confirm.

I concur
I concur.

Mine matches, except you have extra spaces at the end of the line. You can fix that using this neat trick

```c
char* sep = "";
while(!done) {
...
    fprintf(fp, "%s", sep);
    displayInternalNode fp, node);
    sep = " ",
}
```
